SYS://CV — CURRICULUM_VITAE

Muntasir Adib

ASPIRING CYBERSECURITY ANALYST | SOC OPERATIONS

● OPEN TO SOC INTERNSHIPS & ENTRY-LEVEL BLUE-TEAM ROLES

// CAREER_OBJECTIVE

Entry-level SOC analyst candidate with hands-on lab experience in alert triage, PCAP analysis, and NIST-aligned incident response. Targeting Tier 1 SOC and blue-team analyst roles.

// TECHNICAL_SKILLS

SOC Operations

Alert Triage · Incident Response · Threat Detection · MITRE ATT&CK

Network Defense

Wireshark · tcpdump · PCAP Analysis · Nmap · TCP/IP

Scripting & Automation

Python · Bash · Regex · JSON · Git · Docker (basics)

Linux & Endpoint

Linux Admin · EDR Concepts · Sysinternals

// EDUCATION [03]

B.Sc. in Information and Communication Technology (ICT) — 2024 - Present

Institute of Information Technology, Jahangirnagar University

CURRENTLY PURSUING

HSC in Science — 2020 - 2022

Bhawal Badre Alam Govt. College

GPA 5.00

SSC in Science — 2017 - 2020

Gazipur Cantonment Board High School

GPA 5.00

// KEY_PROJECTS [05]

CyberShield — Mini SOC Detection Software

Real-time mini-SOC dashboard: threat simulation, risk scoring, incident tracking, live alerting.

- Engineered a full-stack security monitoring dashboard that simulates threat events, evaluates risk scores, tracks the incident lifecycle, and streams live alerts to a single pane of glass.
- Models the detection-to-triage workflow end to end — alert generation, severity scoring, and incident resolution.

Next.js · TypeScript · Prisma · Real-Time Streaming

Packet Triage Lab — PCAP-to-Verdict Workflow

Raw packet captures in, documented triage verdicts out.

- Repeatable Wireshark + Python workflow converting raw PCAP captures into documented verdicts: what happened, which hosts were involved, what to escalate.
- Protocol dissection, stream reassembly, and IoC hunting across TCP/IP, DNS, and HTTP traffic to corroborate suspicious signals and define evidence-preserving escalation conditions.

Incident Response Lab — Triage Playbooks

Ransomware, C2 beaconing, DNS tunnelling, and phishing drills with published write-ups.

- Authored a 5-step ransomware triage playbook: EDR signal corroboration, volatile evidence preservation, network isolation, blast-radius scoping, and P1 escalation rules.
- Published four triage write-ups (Oct–Nov 2026) covering ransomware first response, C2 beaconing detection using inter-arrival variance, DNS tunnelling exfiltration, and a phishing triage ladder.

EDR Concepts Sysinternals netstat/ss Identity Logs

VIEW THE TRIAGE LAB

Log Enrichment Scripts

Python parsers turning raw logs into queryable events before SIEM ingestion.

- Normalizes, parses, and enriches raw logs into queryable JSON events, reducing pre-SIEM noise for cleaner detection rules.
- Automates repetitive triage and log-gathering tasks as small defensive tooling.

Python Regex JSON
